SAFETY MANAGEMENT PLAN

FORWARD

Texas State Technical College Waco is committed to maintaining a safe and healthful working environment for its students, staff and faculty.

The college has established the Risk Management Planning Committee to provide support of the overall safety management program.

It is essential that all members of administration and management take an active part in initiating preventive measures to control hazards associated with activities under their direction. Safety is the most important and integral part of all academic, technical and support programs of the college.

Each individual employee is responsible for their own safety and the safety of those around them. No operation is so important that safety precautions are not to be taken. It is the individual's attitude, knowledge of safe practices, and taking safe actions that will determine the success of the college's safety programs.

President, Texas State Technical College
